

ABSTRACT OF THE TECHNICAL CONTENT OF THE INVENTION

The invention relates to the field of the necessities of life and more particularly to the field of cosmetics, hygiene and skin products.

5

More specifically it relates to aqueous, fluid or gelled, cosmetic compositions intended to be applied to the skin, the mucous membranes or the teguments, characterized in that they contain, as active ingredient, a gelling and/or thickening agent formed from a combination of three constituents, namely a polyacrylamide and ammonium acrylate copolymer and/or an anionic acrylic copolymer, lecithins or phospholipids of plant origin, and a polyglyceryl acylate, in combination or in a mixture with excipients or appropriate vehicles for topical use.

10

These compositions can incorporate other appropriate active ingredients in particular for use in cosmetics.

15

Use in cosmetics or in skin products for the production of perfectly stable emulsions, gels, or creams.
